November 12, 2016

This appendix consists of five sections. The first reports robustness checks regarding the unconditional relationship between term limits and conflict initiation. The second section reports robustness checks regarding the conditional relationship between term limits, leaders' preferences, and conflict initiation. The third contains a table of the countries included in our data set. The fourth contains a set of summary statistics and cross-tabs between leaders' lame duck status and our three indicators of leaders' preferences. The fifth provides information about our post-estimation simulations.

1 Unconditional Models

1.1 Additional Control Variables

Table SA-1: Term Limits, Leaders' Preferences, and Interstate Conflict Initiation, 1960-2001

	Model 1	Model 2	Model 3
Term Limited	-0.48*	-0.50*	-0.59*

*:state had a term limited leader at some point between 1960 and 2001.

4 Summary Statistics

Table SA-20 reports summary statistics for the variables used in our primary specifications.

Table SA-20: Summary Statistics

Variable	Mean	Minimum	Maximum	Observations
Conflict Initiation	0.11	0	1	2245
Lame Duck	0.23	0	1	2245
Hawkish Index _{Empirical}	0.60	-1	3	2245
Hawkish Index _{Theoretical}	0.31	0	3	2245
Military Service	0.16	0	1	2180
Rivalry	0.29	0	1	2245
Number of Borders	2.95	0	14	2245
Parliamentary System	0.60	0	1	2245
Female Leader	0.04	0	1	2245
Peace Years	8.8	0	41	2245

Tables SA-21, SA-22, and SA-23 report a set of cross tabs between *Term Limited* and our three indicators of leaders' preferences, with the number of conflicts initiated given each respective combination of values in parentheses.

Table SA-21: Distributions of *Term Limited*, *Hawkish Index_{Empirical}*, and *Conflict Initiation*

	<i>Hawkish Index_{Empirical}</i>					Total
	-1	0	1	2	3	
Re-Electable (Initiations)	48 (1)	829 (81)	611 (73)	243 (46)	8 (4)	1,739 (205)
Term-Limited (Initiations)	6 (1)	274 (24)	174 (17)	47 (6)	5 (4)	506 (52)
Total	54 (2)	1,103 (105)	785 (90)	290 (52)	13 (8)	2,245 (257)

Table SA-22: Distributions of *Term Limited*, *Hawkish Index_{Theoretical}*, and *Conflict Initiation*

	<i>Hawkish Index_{Theoretical}</i>				Total

Term-Limited (Initiations)	461 (44)	43 (8)	504 (52)
Total	1,827 (196)	353 (61)	2,180 (257)

5 Post-Estimation Simulations

All of the post-estimation quantities presented here and in the manuscript were calculated using simulations. For a given model, the simulations were conducted as follows. We took 10,000 draws from a multivariate normal distribution based on the estimated coefficient and variance-covariance matrices of the mode. This was done with the “drawnorm” command in Stata. We then calculated the probability of conflict initiation for each of the 10,000 vectors of simulated coefficients given 1) a democratic leader when she was electorally accountable; and 2) a democratic leader when she was term limited. For our conditional analyses, we calculated 1) and 2) across the range of the relevant indicator of leaders’ preferences. We then calculated the difference between 1) and 2). The point predictions reported in the manuscript and in this appendix represent the mean quantity yielded by the simulations. The lower and upper bounds of the 95% confidence intervals represent the 2.5th and 97.5th percentile values yielded by the simulations. The post-estimation simulations based on models that included control variables assumed the control variables took on the mean values of continuous variables and median values of ordinal or nominal variables, with one exception. The exception was the variable *Parliamentary System*, which was set to represent a presidential system as binding term limits are typically a characteristic of presidential systems.
